1. I require the following information:

- Total number of vehicles reported stolen, split by
 - o Theft of vehicle
 - o Aggravated taking without consent/take and drive away (which I believe are the same thing)
 - o Taking without consent/take and drive away
 - o Car key burglary
- Of that total number, how many were privately owned vehicles
- Of that number, how many were owned by a business

It would be useful to have statistics from the past 5 years; would it be possible to have figures for the period 2009-2014?

We are unable to identify if the vehicle was owned by a business or by an individual. However, we can identify thefts where the victim was a company, or where the victim was an individual.
