

REQUEST

I am trying to get a sense of how more there is to do in terms of digital intelligence & do you also hold a figure for the current backlog in the number of devices waiting to be forensically examined?

Offer:

1, The total number of devices forensically examined by Digital Forensics Team, however this would not include examinations in other areas of force. Please note that we are unable to supply any further breakdown as this information is not available within the current case management system.

The Total Number of devices forensically examined by Digital Forensics Team Only (does not include examinations in other areas of force such as DMI's).

2015 = 7,684

2016 = 8,698

2017 = 8,249

2018 = 7,096

2, Do you also hold a figure for the current backlog in the number of devices waiting to be forensically examined?

There are currently 930 mobile devices awaiting examination
